* Source: United Nations Development Program
¥ The total number of pregnancies is the sum of the number of live-births, stillbirths, spontaneous and induced abortions.
§ The total pregnancy rate (TPR) and the annual pregnancy rate per 1000 WOCBAs are weighted means per region and is for illustration purposes only. The number of pregnancies at risk was derived directly as the sum of the national estimates within each region and globally. They differ slightly from similar estimates obtained indirectly by use of the weighted regional or global estimates for pregnancy rates.
# Includes countries where *P. falciparum* and *P. vivax* co-exist
¶ Stable transmission: >= 1 autochthonous *P. falciparum* cases per 10,000 people per annum; Unstable transmission <1 autochthonous *P. falciparum* cases per 10,000 people per annum [14]
Abbreviation: N. America: North America; S. America: South America; MEC: Malaria Endemic Countries; TPR: Total Pregnancy Rate; WOCBA: Women of Childbearing Age (15-49 years of age).
Continent information: see table S1 for the countries included under the different continent and WHORO where Africa is denoted by 1; Asia by 2; Oceania by3; North America 4 , South America 5 and Europe 6
Regions information: The Africa and Europe regions are defined as the respective continents; Americas is defined as 'North America' plus 'South America' countries and Asia region defined as Asia-Pacific and Oceania combined
